Set up V9 in MetaTrader 5

From download to your first demo test: install V9 and load your selected risk profile and sizing file.

Symbol, timeframe and broker requirements are listed in the private delivery instructions. Start on demo.

01 / Extract the package

Extract the ZIP completely. It contains the .ex5 bot, purchased risk profiles in Presets, and setup instructions. Keep a backup.

02 / Prepare MetaTrader

Open the desktop version of MetaTrader 5 and sign in to a demo account first. Check that you are using the correct installation and account. Keep Algo Trading switched off during setup.

03 / Install the bot file

In MetaTrader, choose File > Open Data Folder. Open MQL5 > Experts and copy the .ex5 file into that folder. The compiled .ex5 file does not need to be compiled again.

04 / Find V9 in the Navigator

Restart MetaTrader after copying the file. Open View > Navigator. V9 should appear under Expert Advisors. If it is missing, check the data folder of this specific installation.

Setup & demo

05 / Attach V9 to the chart

Open the chart using the symbol and timeframe specified in your private delivery instructions. Drag V9 from the Navigator onto that chart. A chart can run only one Expert Advisor.

06 / Load your preset

Open Inputs > Load. In Presets, open a purchased risk profile and choose the file ending in _20, _50 or _100 for the desired sizing percentage. Load only one file per bot instance. For older purchases, use the supplied V9_Originalpreset.set.

07 / Start on a demo account

Check the account, chart and preset first. Then allow Algo Trading both for V9 and with the global MetaTrader button. The global button affects all Expert Advisors in that installation. Do not enable extra permissions unless your delivery instructions specifically require them.

08 / Check operation

Check the bot name on the chart and the messages in Experts and Journal. Starting the bot does not mean it will trade immediately. For continuous local operation, MetaTrader, your computer and the connection must remain active; sleep mode interrupts operation.

Presets & operation

Low, medium and high are relative position-size profiles, not loss limits. Each purchased profile includes 20%, 50% and 100% sizing files. Sizing scales with current equity; broker lot limits and margin affect execution. Test on demo. Published backtests do not validate every new sizing combination.

Pause

Switching off Algo Trading prevents new automated trading actions. Existing positions are not closed automatically, and their automated management may stop too. Check open positions separately in the trading window.

V9 does not appear

Check the file extension, make sure the ZIP is extracted and verify the MQL5 > Experts folder. Then restart MetaTrader.

V9 does not trade

Check the connection, account permissions and both Algo Trading settings. Read the Experts and Journal messages. Do not change internal settings simply to force a trade.

The preset or file is rejected

Use only the files supplied with the package. Send support the exact error message and product version. Never send passwords or account credentials.

VPS & account changes

Computer or VPS

MT5 and V9 must stay running and connected. A smartphone or the MT5 web terminal cannot run this EX5 bot. For local use, disable sleep during operation. Alternatively set up a Windows VPS with MT5 or migrate the configured chart and EA to MetaTrader virtual hosting. Rental is separate from this purchase. Verify the VPS logs after setup and after every preset change. Do not run the same account locally and on the VPS at the same time.

Changing FTMO phases

The licence permits one active account. Transfers within the same FTMO 2-Step process to your own Verification and subsequent FTMO Account are included. Stop V9 on the old terminal/VPS and check open positions first. Sign in to the successor account with FTMO-provided credentials, check the account, symbol, sizing and permissions, then configure the bot and VPS again. Do not assume virtual hosting switches accounts automatically. The unchanged bot has no additional shop activation mechanism; the licence restriction is contractual.

Check the account rules

V9 is intended for the FTMO 2-Step MT5 workflow. This does not guarantee that any preset meets every current account rule, passes a phase or receives an account. Check the current FTMO terms, loss limits and third-party EA rules before use. V9 is independent of FTMO.
